

## Huba at MCE Mostra 2024 – Pressure and flow sensors for HVAC-requirements

«The most actual themes will be the leading ones for MCE 2024»: With its three main topics 'Technologies and smart building networking, rational and waste-free use of resources and new business models and strategies on the way to carbon neutrality', MCE Mostra 2024 offers Huba Control AG the ideal platform to present its sensors for intelligent measurement of pressure & flow.

Huba Control AG exhibits at MCE Mostra from 12. to 15. March 2024 in hall 3, booth R31. The trade fair presentation will focus on reliable pressure and flow sensors for building air conditioning applications.

Product highlights such as the new pressure transmitter type 560, which has been specially developed for applications with refrigerants and media of safety classes A2L and A3. The version with copper soldering tube can be soldered directly into the pipe system of refrigerant applications such as heat pumps. Or the type 555 pressure transmitter especially for hydrogen applications. This compact relative pressure transmitter with EC79:2009 certification offers high measuring accuracy and works reliable in mobile applications, e.g. monitoring the pressure at the H<sub>2</sub> tank in hydrogen vehicles.

We will be pleased to welcome all customers, partners and interested parties on our booth in Milan.

### **About Huba Control AG:**

*Huba Control AG is one of the leading manufacturers of precision pressure and flow sensing components. With our extensive technological expertise, we develop and produce high-quality pressure switches, pressure and flow sensors. Our market-oriented solutions and innovative products make a significant contribution to the conservation of energy resources and the reduction of pollutant emissions.*

*Since 1945, we have been known for our collaborative partnership with customers, individual accountability, transparent communication, and team spirit – values that shape our corporate culture.*
