

PV energy contracting with AEW Energie AG - together for a green future

Würenlos, 8th October 2023 - Huba Control AG is taking another step towards sustainability. In cooperation with the energy supplier AEW Energie AG, a state-of-the-art photovoltaic system has been installed on the company's six roof areas in Würenlos. A total of 1,776 solar modules were installed as part of the building and roof renovation work.

With a nominal output of 717 kWp, the PV system will generate around 700,000 kWh of clean energy per year. This will enable Huba to cover over 16% of its energy requirements and at the same time avoid the emission of around 515 tonnes of CO₂ per year.

«We are proud to make our contribution to environmental protection and the support of renewable energies. With AEW PV contracting, we are focusing on sustainable energy generation and significantly reducing our CO₂ footprint," says CEO Dr David Achermann.

AEW Energie AG - the strong partner for renewable energies

The project was realised in close cooperation with AEW, a leading energy supplier with many years of experience in supporting renewable energies. With the contracting agreement, AEW is responsible for the professional installation, operational management and maintenance of the PV system. "This allows us to concentrate on our core business while AEW reliably supplies us with renewable energy. Together with AEW, we are meeting the challenges of the energy transition and focusing on a green future."

With this future-orientated step, Huba Control is underlining its commitment to sustainable and environmentally conscious corporate management. The two parties are also making a valuable contribution to achieving the Energy Strategy 2050.

Key figures of the PV system:

- Nominal output: 717 kWp
- Annual energy production: approx. 700'000 kWh/a
- Self-consumption rate: >95 %
- Degree of self-sufficiency: approx. 16 % of annual consumption

About Huba Control AG:

Huba Control AG is one of the leading manufacturers of precision pressure and flow sensing components. With our extensive technological expertise, we develop and produce high-quality pressure switches, pressure and flow sensors. Our market-oriented solutions and innovative products make a significant contribution to the conservation of energy resources and the reduction of pollutant emissions.

Since 1945, we have been known for our collaborative partnership with customers, individual accountability, transparent communication, and team spirit – values that shape our corporate culture.
